TECHNICAL MEETINGS

Periodic technical/professional training

Benferstain stop is a protective coat specially designed for deep and surface protection of marble and natural stone with low, medium and high porosity. It is also ideal for protecting cotto tiles flooring, terracotta and exposed brick facciavista.

It drastically reduces the absorption of liquids, oily and greasy substances without changing the appearance of the surface treated.

Furthermore, by drastically reducing the water absorption it protects treated materials situated outdoors from aging caused by freezing-thawing cycles.

The barrier against the absorption of water and dirt forms en masse and on the surface and remains effective for a period that varies from a year for surfaces subjected to high traffic to several years on walls.

The product does not protect marble from stains resulting from contact with acids.

Warning

Store at room temperature with the container well closed.

Wear latex gloves. Keep out of reach of children.
