

KIT NEW JOINT

Kit for the restoration of old, degraded joints in floors and walls, in and out.
Perfect for showers, swimming pools, terraces.

Kit for the removal of old cement grout and for the following grouting of joints, especially with epoxy, bi-component joint DEKOGROUT -2K. KIT NEWJOINT 2,5 kg for restoration of 60 linear metres of 3-4 mm wide joints, corresponding, for example, to 6 square metres of coating with tiles of 20 x 20 cm. KIT NEW JOINT 5 kg for restoration of 120 linear metres of 3-4 mm wide joints, corresponding, for example, to 12 square metres of coating with tiles of 20 x 20 cm, or 60 linear metres of 5-6 mm wide joints, corresponding to 6 square metres of coating (or floor), with tiles of 20 x 20 cm.

- Kit is recommended for joints of, at least, 3-4 mm of width.
- Emptying out completely the joints is not necessary, the empty part should be, at least, 2,5–3 mm of depth to be sufficient.
- Emptying out the joints can be very difficult if the pre-existing grout maintains a high hardness.
- It is possible to scrape the tile surface when the scraper goes accidentally out of the tracks during use.
- After removing the old grout, it is necessary to clean accurately the tiles' surface, along with the joints, because DEKOGROUT-2K might be mixed to residues and dirt during application.
- In case of large surfaces, it is possible to use an electric scraper, available on the market.
